Tuesday Seminar

Constraining the exhumation history of the Nagaland ophiolite complex

Abstract

The current understanding of the tectonic significance of blueschist-facies rocks associated with the Indo-Myanmar ophiolite belt is unclear due to a lack of systematic petrological study and the paucity of reliable age data. During the talk, I would present new integrated petrological and geochronological data for samples from the Nagaland complex of the Indo-Myanmar ophiolite belt, northeastern India, which constrains the pressure-temperature conditions and ages of peak and retrograde metamorphism.

**Speaker: Dr. B. Maibam
Dept. of Earth Sciences
Manipur University**

Date	Time	Venue
07-March-2017	16:00 hrs	Ground Floor Lecture Hall

**All are invited to attend and participate in discussion
Tea at 15:30 hrs**
