RECORDED, MARGARET ZAHND, LIBR.

LIBRARY STAFF

PHRASE.

The thesis contains some of the investigations carried out during the period 1960-68 on the subject of Atmospheric Ozone. A scheme of research work on 'Ozone and Weather' under Dr. K. R. Ramamurti is being supported by the Indian Council of Scientific and Industrial Research. I was the recipient of Senior Research Scholarship from the Council during this period.

In the early stages of the work, Mr. S. V. Karandikar helped me to assemble and calibrate spectrophotometer No. 39, for which I am thankful to him.

My colleague Mr. N. N. Pillai has been responsible for taking most of the regular observations at Mt. Abu and making the connected calculations.

Messrs. Ganpat and Kalpagundaram of the India Meteorological Department were responsible for taking the regular observations at Delhi.

The observations and the calculations for the special studies discussed in the thesis were made by me.

I am thankful to Mr. S. V. Venkateswaran for helping

(44)

me to prepare the diagrams and tables intended for the thesis. His help was invaluable at a time when my general health had failed.

Finally, I am grateful to Dr. K. R. Ravinderan who helped me in this work at all stages.

Dr. V. Venkateswaran

CONTENTS.

	PAGE.
I. INTRODUCTION	1
II. METHODS AND DATA ACQUISITION	19
III. INFLUENCE OF CONCENTRATION OF ANESTHETIC OZONE BETWEEN ZERO AND ZERO A AND TWO MOLES ANNEAL	33
IV. RATE VARIATION OF OZONE ABSORPTION	49
V. SPATIAL DISTRIBUTION OF ANESTHETIZED OZONE	67
VI. CONCLUSION	91
APPENDIX	99
