

STUDIES OF LOW LATITUDE IONOSPHERIC IRREGULARITIES

BY

GUNVANTRAI DALPATRAM VYAS

A THESIS

SUBMITTED FOR THE DEGREE OF

DOCTOR OF PHILOSOPHY

OF THE

GUJARAT UNIVERSITY

AHMEDABAD

JUNE 1979

043

B9892

PHYSICAL RESEARCH LABORATORY

AHMEDABAD 380009

Dedications	
Certificate	
Preface	i
Acknowledgements	iv
List of Author's Publications	vii
Contents	ix
 <u>Chapter-I</u> : Introduction	1
1.1 Characteristics of the equatorial ionosphere	2
(a) Atmospheric dynamo	2
(b) Conductivity	3
(c) Electrojet	6
(d) E-region electric field	11
1.2 Motion in the upper atmosphere	13
(a) Motion of the neutral atmosphere	13
(b) Motion of the ionization	15
1.3 The methods for measuring neutral air motion	16
(a) Ground-based method	16
(b) Vehicle-borne method	17
1.4 Method for measuring bulk plasma motion	18
(a) The Thomson incoherent scatter technique	18
(b) Rocket injection technique	19
1.5 Techniques for measuring motion of irregularities	19
(a) Closely spaced receiver technique	20

	<u>Page</u>
(b) Radio star and satellite scintillation methods	21
(c) VHF and HF forward-scatter technique (Doppler shift)	21
1.6 Review of drift at equatorial latitudes	23
<u>Chapter-II</u> : Development and construction of drift equipment	28
2.1 Introduction to overall set-up	28
2.2 Pulsed transmitter	29
(a) Triggered pulse generator	32
(b) Modulator, oscillator and power amplifier	33
2.3 Receiving system	34
(a) Receiver	34
(b) Trigger unit	37
(c) Delayed pulse generators	38
(d) Electronic switch and step-wave generator	38
(e) Sweep circuit	40
(f) Display units	41
2.4 Recording system	42
(a) Camera unit	42
(b) Time marker unit	43
2.5 Antenna system	43
<u>Chapter-III</u> : Methods of data reduction	45
3.1 Introduction	45
3.2 Time delay method	45
3.3 Full correlation method of analysis of fading records at spaced receivers	48

3.4	Spectral analysis of fading records (dispersion method)	57
3.5	Full correlation method with filtering the fading records	61
3.6	Dependence of drift parameters on receiver separation	64
<u>Chapter-IV</u> : Studies of apparent drift speed at Tiruchirapalli		67
4A	Results of apparent drift speed	68
4A.1	Introduction	68
4A.2	E-region results	68
4A.3	F-region results	71
4A.4	Daily variation of E-W and N-S components of E and F region drift at Tiruchirapalli	75
4A.5	Comparison of E and F region drifts at Tiruchirapalli with similar results at Thumba	79
4A.6	Latitudinal dependence of ionospheric drift	82
4A.7	Lunar tidal oscillations in the horizontal drift at Tiruchirapalli	83
4B	Correlation studies with other geophysical parameters	86
4B.1	Introduction	86
4B.2	Ionospheric drifts in relation to the equatorial electrojet	86
	(a) Day-to-day variation of the drift speed and the electrojet	86
	(b) Drift during counter-electrojets	90
	(c) Contour maps of counter-electrojet events in the Indian zone	91

4B.3 The effects of magnetic activity on ionospheric drifts	94
(a) Drift during quiet and disturbed days	94
(b) Relation between drift and Kp	95
(c) Interplanetary magnetic field and the drift at Tiruchirapalli	96
<u>Chapter-V</u> : Results of full correlation analysis	98
5.1 Introduction	98
5.2 E-region results	100
5.3 F-region results	104
5.4 Discussions	110
<u>Chapter-VI</u> : Studies of the dispersive properties of the ionospheric drifts	113
6.1 Introduction	113
6.2 Cross-spectrum results of the ionospheric drift at Tiruchirapalli	115
6.3 Studies of the effects of filtering the amplitude on drift velocities determined by full-correlation method	118
<u>Chapter-VII</u> : Studies of spread-F at equatorial station Huancayo	123
7.1 Introduction and a brief review of equatorial spread-F	123
7.2 Studies of spread-F at equatorial station Huancayo	134
<u>Chapter-VIII</u> : Conclusions and suggestions for future work	138
References	144
