

Investigations on the F region of the ionosphere over low latitudes using optical, radio and simulation techniques

A THESIS

submitted for the award of Ph. D degree of

MOHANLAL SUKHADIA UNIVERSITY

in the

Faculty of Science

by

Dibyendu Chakrabarty

Under the Supervision of

Ramanathan Sekar, Associate Professor, Physical Research Laboratory,
Ahmedabad

DEPARTMENT OF PHYSICS

FACULTY OF SCIENCE

MOHANLAL SUKHADIA UNIVERSITY

UDAIPUR

Year of Submission: 2007

Contents

1	Introduction	1
1.1	Thermosphere	1
1.2	Ionosphere	3
1.3	Ionosphere-thermosphere system, ITS	4
1.3.1	Effects of neutral wind	5
1.3.2	Effects of waves	6
1.3.3	Effects of electric fields	7
1.3.4	Effects of chemical processes	7
1.4	Thermospheric airglow radiation	9
1.4.1	OI 630.0 nm and 777.4 nm airglow	10
1.5	F region dynamics during daytime: role of E region dynamo	11
1.6	F region dynamics during nighttime: role of F region dynamo	14
1.7	Space weather disturbances: solar flare and coronal mass ejection	17
1.8	Impacts of geomagnetic storm on ITS over low-equatorial latitudes	18
1.9	Disturbance Dynamo	24
1.10	Magnetosphere and plasmasphere	25
1.11	Magnetosphere-ionosphere coupling: an electric field perspective	27
1.11.1	Shielding of Convection electric field: Role of ring current	29
1.11.2	Shielding and Alfvén layer	31
1.11.3	Shielding : Undershielding (Prompt penetration) and overshielding	34
2	Optical, radar and simulation techniques	39
2.1	Introduction	39
2.2	Airglow Photometry	39
2.2.1	Front-end optics	41
2.2.2	Filter section	41

2.2.3	Detector section	42
2.2.4	Mirror and filter movements	44
2.3	VHF Radar and Ionosonde (HF radar) techniques	44
2.3.1	Principles of VHF radar	44
2.3.2	Reduction of VHF radar data	46
2.3.3	Principles of Ionosonde (HF radar)	49
2.3.4	Reduction of ionosonde data	50
2.4	Numerical Simulation technique	51
3	Coordinated observations of Equatorial Spread F by optical and radar techniques	55
3.1	Background	55
3.2	Identification of plasma enhancement structure associated with ESF	57
3.3	Discussion on the observational evidence of plasma enhancement structures associated with ESF	62
3.4	Simultaneous optical and radar observations during 2003-2006 on ESF structures	64
3.4.1	11 February, 2004	65
3.4.2	19 March, 2004	65
3.4.3	21 March, 2004	66
3.4.4	28 March, 2003	66
3.4.5	12 February, 2005	67
3.4.6	6 March, 2005	67
3.4.7	7 February, 2005	67
3.4.8	6 February, 2005	70
3.4.9	20 March, 2004	70
3.4.10	29-30 January, 2006	70
3.5	Discussion on the observational features during 2003-2006	80
3.6	Summary	82
4	Space weather events and ionospheric F region over low latitudes	83
4.1	Background: Interplanetary electric field and thermospheric airglow emission	83
4.1.1	Observations and Results	84

4.1.2	Discussion	93
4.2	Background: Interplanetary electric field and equatorial spread F	97
4.2.1	Data from multiple techniques	99
4.2.2	Results	99
4.2.3	Discussion	103
4.3	Summary	107
5	Numerical simulation model investigation of storm-time plasma irregularities	109
5.1	Background	109
5.2	Numerical Simulation Model	114
5.2.1	Inputs to the model	114
5.3	Results	117
5.4	Discussion	119
5.5	Summary	123
6	On the dependence of 777.4 nm airglow on ionospheric parameters	125
6.1	Background	125
6.2	Observations	126
6.3	Discussion	129
6.4	Summary	134
