

Infrared Studies of Novae

A Thesis

Submitted to

Gujarat University
Ahmedabad

for
The degree of
Doctor of Philosophy

in
Physics

by
Ramkrishna Das

Astronomy & Astrophysics Division
Physical Research Laboratory
Ahmedabad 380009
Gujarat, India

Statement	viii
1 An Introduction to Novae	1
1.1 Early studies of novae and other eruptive variables	2
1.1.1 Pre 1900 history	3
1.1.2 Modern history	5
1.2 Physical structure	7
1.3 Masses and orbital period	8
1.4 Classification of cataclysmic variable stars	8
1.5 Origin and evolution of CVs	11
1.6 Outburst mechanism: thermonuclear runway	14
1.7 Post-outburst development of novae	16
1.8 Observational properties of novae	18
1.8.1 Evolution of the optical light curve	18
1.8.2 Evolution of the optical spectra - general characteristics: . . .	20
1.9 General properties of novae obtained from lightcurves and spectra .	22
1.9.1 Distribution and frequency of novae in the Galaxy	22
1.9.2 Characteristic times	23
1.9.3 Speed class	23
1.9.4 Maximum magnitude vs. rate of decline (MMRD) relation .	24

1.9.5	Modern spectral classification	25
1.10	Determination of physical parameters	26
1.10.1	Angular radius and distance to nova	27
1.10.2	Velocity and geometry of the ejecta	27
1.11	Astronomical significance of novae	29
1.12	Observations of novae in different regimes: Radio, IR, UV, X-rays, γ-rays	30
1.13	Significance of IR observations of novae	34
1.14	Motivation and scope of the present work	35
2	Observations and Data Analysis	38
2.1	Mount Abu telescope	39
2.2	PRLNIC	39
2.3	General procedure of observations	46
2.3.1	Procedure for spectroscopic observations	46
2.3.2	Procedure for photometric observations	47
2.4	Data analysis	47
2.4.1	Extracting spectra	48
2.4.2	Photometric data reduction	49
2.4.3	Flux Calibration	53
2.5	Observations of novae	53
3	Study of RS Oph	55
3.1	Introduction	55
3.2	Observations	57
3.3	Results	58
3.3.1	Photometry: The <i>JHK</i> Lightcurve	58
3.3.2	Spectroscopy: General characteristics of the <i>JHK</i> spectra and line identification	61
3.3.3	Detection of shock wave and its behavior	63
3.3.4	Mass of the white dwarf	73
3.3.5	Evidence for a bipolar flow	73
3.3.6	The Fe II lines at 1.6872 and 1.7414 μm	76
3.3.7	Site of the near-IR line emission and studying the possibility of shock breakout	79
3.3.8	Recombination analysis of the H I lines	81
3.3.9	Evolution of the coronal lines	84
3.4	Summary of the work	87

4 Study of V1280 Sco	89
4.1 Introduction	89
4.2 Observations	90
4.3 Results	92
4.3.1 Optical lightcurve	92
4.3.2 General characteristics of the <i>JHK</i> spectra	94
4.3.3 Line identification and detailed study of spectral features	94
4.3.4 Can we predict which novae will form Dust from early infrared spectra?	108
4.3.5 Evidence for sustained mass loss	111
4.3.6 The initial fireball phase of V1280 Sco	113
4.3.7 The <i>JHK</i> light curve of V1280 Sco	118
4.4 Summary of this chapter	119
5 Study of V2615 Oph	121
5.1 Introduction	121
5.2 Observations	122
5.3 Results	123
5.3.1 Optical and near-infrared lightcurve	123
5.3.2 General characteristics of the <i>JHK</i> spectra	125
5.3.3 An unidentified line at $2.0888\text{ }\mu\text{m}$: possibly a FeII line excited by Lyman α fluorescence?	133
5.3.4 Modeling the CO emission	134
5.3.5 Evolution of the CO emission	139
5.4 Summary of this chapter	142
6 Summary and Scope For Future Work	143
6.1 Summary	143
6.1.1 Results from the study of RS Oph	144
6.1.2 Results from the study of V1280 Sco	145
6.1.3 Results from the study of V2615 Oph	146
6.2 Scope of future work	146
Bibliography	148
