THESIS

SUBMITTED TO THE
UNIVERSITY OF RAJASTHAN
FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
(FACULTY OF SCIENCE)

043

B15949

CO-SUPERVISOR :

PROF A.R. PRASANNA

PHYSICAL RESEARCH LABORATORY

Contents

acknowledgement	i
List of Publications	ii
Preface	iii
1 Introduction	1
1.1 Electromagnetic fields and compact objects	3
1.2 Inertial forces in general theory of relativity	8
1.3 Equilibrium structure of compact objects	13
1.4 Composition of compact objects	17
1.5 Plan of thesis	20
2 Equations of structure for slowly rotating relativistic star: Hartle-metric	21
2.1 Notation and Signature	21

2.2	Introduction	22
2.3	Hartle-metric	24
2.3.1	Evaluation of rotational perturbations	28
2.4	Numerical procedure	35
3	Structure of External Electromagnetic Field around a Slowly Rotating Compact Object and Charged Particle Trajectories Therein	37
3.1	Introduction	37
3.2	Formalism	39
3.2.1	Maxwell's equations in curved spacetime	39
3.2.2	Equations of motion in axisymmetric and stationary field	42
3.2.3	Effective potential	43
3.3	Field Structure	45
3.4	Charged Particle Trajectories	50
3.5	Results and Discussions	53
4	Centrifugal Force and Ellipticity behaviour of a slowly rotating ultra compact object	66
4.1	Introduction	66
4.2	Formalism	68
4.2.1	Equation of motion	68

4.2.2	3 + 1 splitting of spacetime	69
4.2.3	Optical reference geometry	70
4.2.4	Ellipticity	72
4.3	Hartle potentials and optical reference geometry	74
4.4	Quasi-stationary and semi-adiabatic contraction	75
4.5	Results and Discussion	76
5	Effects of equations of state on electromagnetic fields and equilibrium structure	83
5.1	Introduction	83
5.2	Equations of state	85
5.3	Centrifugal force and ellipticity	87
5.4	Electromagnetic fields	95
5.4.1	Maxwell's equations for inside the star	95
5.4.2	Initial conditions	97
5.5	Results and Discussions	97
6	Summary and Conclusions	103
	Bibliography	107
