# STUDIES OF DAYTIME UPPER ATMOSPHERIC PHENOMENA USING GROUND-BASED OPTICAL TECHNIQUES

A Thesis Submitted to  
The Devi Ahilya Vishwa Vidyalaya of Indore

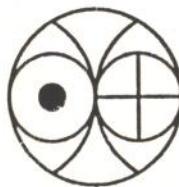

for

THE DEGREE OF DOCTOR OF PHILOSOPHY  
IN  
PHYSICS

by

DUGGIRALA PALLAM RAJU  
(D. PALLAM RAJU)

1996

<b>Acknowledgements</b>	<b>iv</b>
<b>Statement</b>	<b>viii</b>
<b>List of Publications</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Structure of the earth's upper atmosphere . . . . .	1
1.2 Upper atmospheric phenomena . . . . .	8
1.2.1 Equatorial- / Low-latitude phenomena . . . . .	10
1.2.2 High-latitude phenomena . . . . .	23
1.3 High- and low-latitude coupling . . . . .	27
1.4 Optical remote sensing of the upper atmosphere . . . . .	32
1.5 Aim of the present work . . . . .	35
<b>2 Instrumentation</b>	<b>37</b>
2.1 Historical account on ground-based detection of daytime airglow (DAYGLOW)	37
2.2 The new Dayglow Photometer (DGP) . . . . .	41
2.3 Technical details of the DGP . . . . .	42
2.4 Functioning of the DGP . . . . .	49
2.5 Selection/fixing of parameters for the DGP . . . . .	51
2.6 Performance characteristics of the DGP . . . . .	55
2.7 Multi wavelength Daytime Photometer (MWDPM) . . . . .	59
2.7.1 Requirements for the MWDPM . . . . .	59
2.7.2 Novel mask design for the multi wavelength daytime photometry . .	61

2.7.3	Electronic gate-scanning . . . . .	62
2.8	Overall functioning of the multi wavelength daytime photometer . . . . .	64
<b>3</b>	<b>Influence of the geophysical processes on the variabilities of low-latitude OI 630.0 nm dayglow</b>	<b>68</b>
3.1	Processes responsible for O( <sup>1</sup> D) dayglow . . . . .	68
3.2	Dayglow measurements from equatorial- and low-latitudes . . . . .	75
3.2.1	Results from SHAR: a station at the fringe of the equatorial electrojet	76
3.2.2	Results from Thumba/Trivandrum: a station located over the dip equator . . . . .	83
3.2.3	Results from Waltair: a station at the inner edge of the EIA crest .	90
3.3	Estimates of volume emission rate of OI 630.0 nm dayglow due to Dissociative Recombination . . . . .	94
3.4	Results from the regions under the crest of the EIA: Mt. Abu . . . . .	101
3.5	Electrodynamical control on the OI 630.0 nm dayglow . . . . .	107
<b>4</b>	<b>Development of the Equatorial Ionization Anomaly as seen in OI 630.0 nm dayglow</b>	<b>108</b>
4.1	Introduction . . . . .	108
4.2	Dayglow observations from Ahmedabad . . . . .	115
4.2.1	Bidirectional scan of the dayglow emission layer . . . . .	115
4.2.2	Meridional scan of the dayglow emission layer . . . . .	117
4.3	Estimation of the EIA contribution to dayglow . . . . .	118
4.4	Results . . . . .	119
4.5	Discussion . . . . .	124
4.5.1	EIA contribution to dayglow Vs EEJ intensity . . . . .	124
4.5.2	EIA contribution to dayglow Vs TEC . . . . .	126
4.5.3	Remarks . . . . .	129
4.6	Temporal evolution of EIA . . . . .	130
4.7	2-D maps of OI 630.0 nm dayglow . . . . .	131
4.7.1	Removal of solar glare effect . . . . .	132
4.8	Conclusions . . . . .	141
<b>5</b>	<b>Precursor to Equatorial Spread-F in OI 630.0 nm dayglow</b>	<b>143</b>

5.1	Introduction . . . . .	143
5.2	The dynamics of the F-layer during post-sunset time . . . . .	145
5.3	Generation mechanism of the ESF . . . . .	146
5.3.1	The Rayleigh-Taylor R-T instability . . . . .	146
5.3.2	Plasma instabilities responsible for equatorial spread -F . . . . .	147
5.3.3	Role of integrated Pedersen conductivity . . . . .	150
5.4	Simulation studies on the generation of plasma bubbles . . . . .	151
5.5	Morphology of the irregularity/ESF occurrence . . . . .	153
5.6	Day-to-day variability of ESF . . . . .	159
5.7	Correlation between EIA and ESF . . . . .	161
5.8	Bidirectional scanning of dayglow intensities . . . . .	164
5.9	Results . . . . .	169
5.10	Discussion and Conclusion . . . . .	174
<b>6</b>	<b>Daytime auroral emissions from Antarctica</b>	<b>178</b>
6.1	Introduction . . . . .	178
6.2	Auroral emissions . . . . .	184
6.3	The Daytime aurora . . . . .	189
6.4	Results . . . . .	190
6.4.1	Low-energy electron induced emission . . . . .	191
6.4.2	High-energy electron induced emissions . . . . .	194
6.4.3	Proton-induced emission . . . . .	201
6.5	Similarities between various emissions . . . . .	205
6.6	Discussion . . . . .	207
<b>Scope for future work</b>		<b>213</b>
