PHOTOABSORPTION STUDIES OF MOLECULES AT DIFFERENT TEMPERATURES

by

V. PRAHLAD

A THESIS
SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
OF THE GUJARAT UNIVERSITY

FEBRUARY 1996

Physical Research Laboratory
Ahmedabad 380 009
INDIA

Contents

CERTIFICATE	i
STATEMENT	ii
ACKNOWLEDGEMENTS	viii
1 INTRODUCTION	1
1.1 Photoabsorption Cross Section of Gases	1
1.1.1 Beer-Lambert Law	1
1.1.2 Semi-classical Description of Photoabsorption	3
1.2 Electronic States of Molecules	4
1.2.1 Schrödinger Equation for a Molecule	5
1.2.2 Born-Oppenheimer Approximation	5
1.2.3 Potential Energy Diagram of Electronic States	6
1.2.4 The Notation of Electronic States	8
1.3 Vibrations and Rotations of Molecules	10
1.3.1 Vibrational Levels of a Molecule	10
1.3.2 Rotational Levels of a Molecule	11
1.3.3 Vibrational and Rotational Constants	13
1.3.4 Thermal Distribution of Vibrational levels	14
1.3.5 Thermal Distribution of Rotational Levels	15
1.4 Electronic Transitions	19
1.4.1 Selection Rules	20

1.4.2	Franck-Condon Principle	21
1.4.3	Hönl-London Formulae	22
1.4.4	Photoabsorption for Polyatomic Molecules	23
1.5	Nature of Photoabsorption Spectrum	24
1.6	Effect of Temperature on Photoabsorption Spectrum	27
1.6.1	Temperature Dependence in Continuous Spectrum	28
1.6.2	Temperature Dependence in Structured Absorption	29
1.7	Importance of Photoabsorption Cross section in Planetary Atmospheres	29
1.7.1	Thermal Structure of Planetary Atmospheres	30
1.8	Survey of Experimental Methods	32
1.8.1	Techniques of Photoabsorption	32
1.8.2	Types of Photoabsorption Chambers	33
1.8.3	Temperature Variable Photoabsorption Chambers	34
1.8.4	Merits of the Present Photoabsorption Chamber	35
1.9	Choice of Target Gases	36
2	EXPERIMENTAL SET-UP	37
2.1	The Ultraviolet Continuum Source	38
2.1.1	Choice of Light Source	38
2.1.2	Description of the Source	39
2.1.3	DC Power Supply	40
2.1.4	Operation of the Source	41
2.1.5	Performance of the Source	42
2.1.6	Effect of Contamination	43
2.1.7	Cleaning Procedure	44
2.2	VUV Monochromator	44
2.2.1	Description of the Monochromator	44
2.2.2	Resolution of the Monochromator	45
2.2.3	Wavelength Calibration of the Monochromator	46

2.3	Beam Splitter	46
2.4	Photoabsorption Chamber	48
2.4.1	Construction of the Chamber	48
2.4.2	The Temperature Gradient and Optical Path Length	50
2.4.3	Beam Alignment Assembly	51
2.4.4	Optical Alignment	52
2.5	Cold Bath	52
2.6	Cooling Unit	53
2.7	The Vacuum System	55
2.8	Pressure Measurement System	56
2.9	Vapour Extraction and Gas Handling System	58
2.10	Photon Detectors	59
2.10.1	Description	60
2.10.2	Choice of Photomultiplier Tube	62
2.10.3	High Voltage Units	62
2.10.4	Photon Counting	63
2.10.5	Dark Count	63
2.10.6	Signal-to- Noise Ratio	64
2.11	Data Acquisition System	65
2.12	Operation and Performance of the System	66
3	METHOD	71
3.1	Photoabsorption Cross Section Measurement	72
3.2	The Validity of Beer-Lambert Law	74
3.3	Thermal Transpiration Effect	78
3.3.1	Thermal Transpiration Correction for MKS Capacitance Manometers	79
3.3.2	Thermal Transpiration Corrections for CCl_4 and SO_2	82
3.4	Vapour Pressure of the Target Gas	84
3.4.1	Vapour Pressure Constraint on Absorbance.	85

3.4.2 Temperature of the Target Gas	87
3.5 Adsorption of the Target Gas	88
4 ERROR ANALYSIS	91
4.1 Error in Pressure Measurement	92
4.2 Error in Temperature Measurement	92
4.3 Error in Optical Path Length	93
4.4 Error in the Measurement of Intensities	93
4.5 Impurities of Target gases	94
4.6 Error in Photoabsorption Cross Section	95
5 RESULTS AND DISCUSSION	96
5.1 Photoabsorption Cross Sections of CCl_4	96
5.1.1 Cross Sections at 300 K	96
5.1.2 Cross Sections at Low Temperatures	98
5.2 Photoabsorption Cross Sections of SO_2 (280 - 320 nm)	107
5.2.1 Cross Sections at 300 K	107
5.2.2 Cross Sections at Low Temperatures	110
5.3 Photoabsorption Cross Sections of SO_2 (188-220 nm)	115
5.3.1 Cross Sections at 300 K	115
5.3.2 Cross Sections at Low Temperatures	118
6 CONCLUSION AND SCOPE FOR FUTURE WORK	131
6.1 Conclusion	131
6.2 Scope for Future Work	133
