PHOTOMETRIC STUDIES IN INFRARED ASTRONOMY

A Thesis Submitted to
The Devi Ahilya Vishwa Vidyalaya of Indore

for

THE DEGREE OF DOCTOR OF PHILOSOPHY
IN
PHYSICS

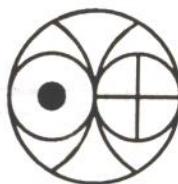

043

B15608

by

SAM RAGLAND

Research Publications	vii
Abstract	ix
1 Introduction	1
1.1 Different methods of achieving High Angular Resolution	2
1.2 The Phenomena of Lunar Occultations	6
1.2.1 A Historical outline	6
1.2.2 Technique	8
1.2.3 Advantages of lunar occultations	13
1.2.4 Disadvantages of lunar occultations	14
1.2.5 Scope of the technique	15
1.3 Motivation for the present Study	18
1.4 Thesis Outline	19
2 Lunar Occultations: Instrumentation and Data Analysis	20
2.1 Instrumentation	20
2.1.1 Optical System	20
2.1.2 Mechanical System	23
2.1.3 Electrical System	25
2.1.4 System Time Response Calibration	28
2.1.5 CVF Spectral Calibration	30
2.1.6 The Infrared Sky Background in the vicinity of the Moon	33

2.1.7	System Performance	38
2.2	Data Analysis	40
2.2.1	Nonlinear Least Squares technique	40
2.2.2	Varying Background Light	41
2.2.3	Effect of Finite Source size	42
2.2.4	Effect of Finite Optical Bandwidth and System Wavelength Response	42
2.2.5	Effect of Finite Telescope Aperture	47
2.2.6	Effect of Finite System Time Response	49
2.2.7	Effect of Scintillation Noise	53
2.2.8	Model Independent retrieval of brightness profiles from lunar occultation light curves	54
3	Circumstellar Dust Shell around Evolved Giants	59
3.1	Supergiant: TV Gem	60
3.1.1	An observational history of TV Gem and its surroundings	60
3.1.2	Observations and Data Analysis	62
3.1.3	Direct detection of dust shell	64
3.1.4	Circumstellar dust distribution	69
3.2	Carbon star: TX Psc	76
3.2.1	Observations	77
3.2.2	Detection of asymmetry in the brightness profile	78
3.2.3	Circumstellar Envelope around TX Psc	82
4	Milliarcsec Resolution studies of Late-type Giants	88
4.1	Observations and Data Analysis	88
4.2	Effect of 50 Hz modulation	94
4.3	Occultation Results	95
4.3.1	Resolved Sources	95
4.3.2	Unresolved Sources	108
4.4	Indirect Angular Diameter estimation	115
4.5	Model fit to Photometric data	117

5 Infrared studies of the fast nova – Nova Herculis 1991 (V838 Herculis)	125
5.1 An observational history of Nova Her 1991	127
5.2 Observations	128
5.3 IR light curve of Nova Her 1991	131
5.4 Blackbody temperature	136
5.5 Blackbody angular size	136
5.6 Distance to the nova	138
5.7 Early Coronal emission in Nova Her 1991	140
5.7.1 Detection of a spectral emission line	140
5.7.2 Line identification	149
5.8 Mass of the envelope	151
5.8.1 Mass of gas expelled in the outburst	151
5.8.2 Mass of grains expelled in the outburst	151
5.8.3 Mass density of gas expelled in the outburst	152
5.9 Early dust formation in Nova Her 1991	153
5.10 Pre-existing material around Nova Her 1991	156
6 Summary and Scope for Future work	159
Bibliography	165
