# Nitrogen Isotopic Systematics in Ureilites

## A THESIS

submitted for the Award of Ph. D. degree of

Mohan Lal Sukhadia University

in the

Faculty of Science

BY

Vinai Kumar Rai

યુદ્ધાલય THE LIBRARY  
ભૌતિક અનુષ્ઠાન પરીક્ષાલક્ષ્મી

<b>Chapter 1</b>	<b>Introduction</b>	<b>1-16</b>
1.1	Ureilites: an enigmatic group of achondrites	1
1.1.1	Geochemical features	2
1.1.2	Models for ureilite petrogenesis	3
1.2	Trapped noble gases in meteorites	4
1.2.1	Elemental abundance pattern	5
1.2.2	Isotopic compositions	6
1.3	Nitrogen in meteorites and planetary objects	9
1.4	Noble gases in ureilite	11
1.5	Carbon and nitrogen in ureilite	12
1.6	Models for origin of planetary gases	13
1.7	Objectives of the present work	15
<b>Chapter 2</b>	<b>Experimental</b>	<b>17-37</b>
2.1	Sample preparation	17
2.1.1	Bulk samples	17
2.1.2	Residue preparation	18
2.2	Mass spectrometry	19
2.2.1	The VG Micromass 1200	19
2.2.2	The extraction system	20
2.3	The gas extraction unit	20
2.3.1	Combustion finger	22
2.3.2	Extraction bottle	22
2.3.3	The main line	23
2.4	Standard procedure	25
2.4.1	Gas extraction	25
2.4.2	Cleaning and separation	27
2.4.3	Mass analysis	28
2.4.4	Data acquisition and reduction	28
2.5	Calibration of the mass spectrometer	31
2.5.1	Mass discrimination	31
2.6	Characterization of residues	36
2.6.1	SEM photograph	36
2.6.2	INAA analysis	37

<b>Chapter 3</b>	<b>Nitrogen in bulk samples of ureilites</b>	<b>38-65</b>
3.1	Introduction	38
3.2	Results	39
3.2.1	Nitrogen in monomict ureilites	39
3.2.2	Nitrogen in diamond free ureilite	54
3.2.3	Nitrogen in polymict ureilites	55
3.3	Discussion	62
3.3.1	General release pattern of nitrogen and noble gases	62
3.3.2	Number of nitrogen components	63
3.3.3	Identification of carriers	64
3.3.4	Heterogeneity in carrier distribution	64
3.5	Summary	65
<b>Chapter 4</b>	<b>Nitrogen in acid residues of ureilites</b>	<b>66-129</b>
4.1	Introduction	66
4.2	Results	73
4.2.1	Physical and Chemical characterization of acid residues	73
4.2.2	Nitrogen in acid residues of monomict ureilites	78
4.2.3	Nitrogen in acid residue of diamond free ureilite	90
4.2.4	Nitrogen in acid residues of polymict ureilites	105
4.3	Discussion	119
4.3.1	Comparison to literature data	119
4.3.2	Heterogeneity of acid resistant residues	119
4.3.3	Carriers of heavy and light nitrogen	121
4.3.4	Nitrogen to argon ratio	126
4.4	Summary	128
<b>Chapter 5</b>	<b>Noble gases in ureilites</b>	<b>130-156</b>
5.1	Introduction	130
5.2	Neon and argon isotopic composition	130
5.3	Elemental abundances of noble gases	131
5.3.1	Release pattern of noble gases	132
5.3.2	Trapping and incorporation of noble gases	134
5.3.3	Laboratory simulation of diamond formation	134
5.3.4	Simulation of ion implantation	135
5.3.5	Elemental abundance of noble gases in ureilite and phase-Q	137
5.4	Physicochemical settings of gas incorporation into phase	139

<b>Q and diamonds</b>		
5.4.1	Live $^{129}\text{I}$ in ureilite diamonds and phase Q	139
5.4.2	Is the excess $^{129}\text{Xe}$ is due to $^{128}\text{Te}(\text{n},\gamma)$ reaction?	142
5.4.3	Live $^{36}\text{Cl}$ in phase Q	146
5.4.4	Can $^{129}\text{I}$ and $^{36}\text{Cl}$ be enriched over Xe and Ar respectively, by ion implantation?	150
5.5	Role of parent body processing in evolution of elemental and isotopic ratios	152
5.6	Noble gas elemental abundance and oxygen isotopic composition of ureilite	155
<b>Chapter 6</b>	<b>Implications of nitrogen studies to the solar nebular/parent body processes</b>	<b>157-168</b>
6.1	Introduction	157
6.2	Trapping of nitrogen in diamonds and amorphous C	157
6.3	Implications	160
6.3.1	Origin of diamonds in ureilites	159
6.3.2	Origin of heavy and light nitrogen	162
6.3.3	Implications to nebular nitrogen composition	163
6.3.4	Is the nebular nitrogen heavy or light?	166
<b>Chapter 7</b>	<b>Conclusions and Future work</b>	<b>169-172</b>
7.1	Conclusions	169
7.2	Scope of future work	172
<b>A</b>	<b>Appendix</b>	<b>173-187</b>
A1	Nitrogen isotopes: <i>the <math>\delta</math> notation</i>	173
A2	Neon in ureilites	173
A3	Krypton in ureilites	178
A4	Xenon in ureilites	182
A5	Details of simulation of ion implantation	185
A6	Mass dependant Rayleigh fractionation of noble gases	186
A7	$\delta(^{36}\text{Ar}/^{38}\text{Ar})$ defined as:	187
	<b>References</b>	<b>188</b>
