New Trapping States and Enhanced Nonlinear Optical Effects in Coherently Driven Systems

A thesis submitted for the degree of

Doctor of Philosophy

043

B16148

by

Harshwardhan Wanare

School of Physics
University of Hyderabad
Hyderabad - 500 046
INDIA

February 1998

Contents

1	Synopsis	vi
2	Introduction	1
2.1	Semiclassical Treatment of Elementary Light-Matter Interaction	5
2.2	Coherent Population Trapping	9
2.3	Adiabatic Transfer	12
2.4	Electromagnetically Induced Transparency	13
2.5	Enhancement of Nonlinear Optical Effects	19
2.6	Quantum Interference and its Various Manifestations	22
2.7	Quantum Interference induced Quenching of Spontaneous Emission . .	25
2.8	Lasing Without Inversion	27
2.9	Modification of Refractive Index	29
3	New Trapping Phenomenon in a Two-Level System with Phase Modulated Fields	32
3.1	Two-Level Dynamics : A Spin - 1/2 System	34
3.2	Population Trapping in Two-Level Systems	36
3.3	Landau-Zener Formula	39
3.4	Results and Discussion	41
3.5	Effects of Spontaneous Emission	43
3.6	Trapped States and Control of Tunneling	44
4	Multiple Landau-Zener Crossings and Quantum Interference Effects using New Trapping Phenomenon	49
4.1	Model	50
4.2	Calculations and Discussion	53
4.2.1	Quantum Interference Effect due to Coherent Evolution	57
4.2.2	Creating Inversion Across Multiple Levels	60

4.3	Classical Analogue of Coherently Driven Atomic Systems : An Optical Atoms Realization	63
5	Control of Optical Bistability	69
5.1	What is Optical Bistability ?	70
5.2	Model Calculations	71
5.3	Electromagnetic Control of Optical Bistability	76
5.4	Control Field Induced Changes in Transient Response	81
5.5	Regression to steady state	84
5.6	Control Field Induced Multistability	86
6	Enhanced nonlinear signal generation under coherent population trapping conditions	90
6.1	Non-perturbative Formulation	92
6.2	Matrix Continued Fraction	93
6.3	Dressed state analysis - Nonlinear signal in the perturbative limit	94
6.4	Enhancement of nonlinear signals	98
6.5	Non-perturbative Regime of Pulse Matching	102
7	Conclusions	108
	Bibliography	110
