

Interferometric investigation of optical beams with phase singularities

A THESIS

**submitted for the Award of Ph.D degree of
Mohan Lal Sukhadia University**

in the

Faculty of Science

BY

Sanjoy Roychowdhury

Under the Supervision of

Dr. R. P. Singh

Physical Research Laboratory

**QUANTUM OPTICS AND QUANTUM INFORMATION DIVISION
PHYSICAL RESEARCH LABORATORY, AHMEDABAD.**

MOHANLAL SUKHADIA UNIVERSITY, UDAIPUR

Year of submission: 2006

CERTIFICATE

This is to certify that the thesis entitled "Interferometric investigation of optical beams with phase singularities" submitted for the award of the degree of Doctor of Philosophy of Mohanlal Sukhadia University in the faculty of Science is a record of bonafide investigations carried out by Shri. Sanjoy Roychowdhury under my supervision and guidance.

This is an original piece of work on which no one has been awarded a degree in this University or in any other University.

The literary presentation of the thesis is satisfactory and it is in a form suitable for publication. The work presented in the thesis has been done after registration in this University.

Further, the candidate has put in attendance of more than 200 days in my institution as required under rule 7(b) and thus completed the residential requirement.

29/11/2006
Dr. R. P. Singh
(SUPERVISOR)

Contents

Acknowledgement	v
Abstract	vii
1 Introduction	1
2 Theoretical background	5
3 Production of optical beams with phase singularities	27
3.1 Material and preparation of hologram	27
3.2 Testing of prepared holograms	29
3.3 Use of hologram to generate various beams by spatial light modulator	30
4 Properties of singular beams through interferometry:	31
4.1 Determination of topological charge	31
4.1.1 Splitting of topological charge	34
4.1.2 Potential of optical vortices wave	36
4.1.3 chirp of optical vortex	37
4.2 Topological charge inversion	37
4.2.1 Topological charge inversion by mirror	37
4.2.2 Topological charge inversion by spherical lens and cylindrical lens . .	41
4.3 Interaction of optical vortices	49
4.4 White Light Interferometry	53
4.5 Bessel beam, Bessel vortex beam and associated interferences	59
5 Wigner function of optical vortex:	60
5.1 Introduction of Wigner function	60
5.2 Experimental determination of Wigner function	63
5.3 Intensity and momentum distribution retrieval from Wigner function	76
5.4 Coherence properties through Wigner function	77

6 Application	78
6.1 Implementation of logic gates	78
6.2 Optical imaging	78
6.3 Explaining natural phenomena	83
Conclusions and Future Outlook	85
Appendix	86
References	95
List of Publications	100
