

Biogeochemistry of Nitrogen Isotopes in Northern Indian Ocean

Thesis submitted to

**The Maharaja Sayajirao University of Baroda,
Vadodara, India**

For the degree of

Doctor of Philosophy in Geology

By

Sanjeev Kumar

November, 2004

**Planetary and Geosciences Division
Physical Research Laboratory,
Navrangpura, Ahmedabad-380 009, India**

Contents

	List of tables	(v)
	List of figures	(vii)
Chapter 1	Introduction	1-23
1.1	Isotopic Fractionation of Nitrogen.....	3
1.2	Natural distribution of $^{15}\text{N}/^{14}\text{N}$	5
1.3	Biogeochemical transformation of nitrogen in the marine environment.....	5
1.3.1	Nitrogen Fixation	6
1.3.2	Assimilation.....	7
1.3.3	Nitrification.....	8
1.3.4	Denitrification.....	8
1.3.5	Mineralisation.....	9
1.4	Global distribution of Nitrogen.....	9
1.5	Role of nitrogen and its isotopes in understanding the ocean biogeochemistry.....	9
1.5.1	Primary production and biological pump: Role in carbon cycle....	11
1.5.2	Concept of New and Regenerated production.....	13
1.5.3	Estimation of New, Regenerated and Export production.....	15
1.5.4	Basis for using nitrogen for new and regenerated production.....	16
1.5.5	$\delta^{15}\text{N}$ in suspended particulate matter.....	16
1.6	Earlier productivity related works in the world ocean and the study Area.....	17
1.7	Scope of the present work.....	19
1.8	Outline of the thesis.....	20
1.9	Scientific questions addressed.....	21
 Chapter 2	 Materials and methods	 23-53
2.1	Introduction.....	25
2.2	New and Regenerated production estimation.....	26
2.3	Sampling.....	27
2.3.1	Bay of Bengal.....	27
2.3.2	Northeastern Arabian Sea.....	31
2.4	Nutrients.....	35
2.5	Tracer addition.....	36
2.6	Incubation.....	36
2.7	Filtration.....	37
2.8	Isotopic Analysis and Instrumentation.....	38
2.8.1	Principle of Analysis.....	38
2.8.2	Instrumentation.....	39

2.9	Standards Used and precision.....	43
2.10	¹⁵ N atom% Measurement	43
2.10.1	¹⁵ N atom% for blank samples.....	43
2.10.2	Error in ¹⁵ N atom% estimation.....	44
2.10.3	Linearity for ¹⁵ N atom%.....	44
2.11	Estimation of Particulate Nitrogen Content	45
2.11.1	Error in the Particulate Nitrogen Content estimates.....	47
2.12	Estimation of uptake rate.....	49
2.12.1	Concept of the general equation for uptake.....	49
2.12.2	Equation used for the calculation of uptake rate during the present study and involved uncertainties.....	50
2.13	Quality Control.....	52
2.14	Physical and chemical parameters.....	52
Chapter 3	The Northeastern Arabian Sea	54-107
3.1	Introduction.....	55
3.2	¹⁴ C based Productivity in the Arabian Sea.....	58
3.3	¹⁵ N based productivity in the Northwestern and the Central Arabian Sea.....	62
3.4	Chlorophyll a, nutrients and physical parameters during January 2003 in the Northeastern Arabian Sea.....	63
3.4.1	Chlorophyll a.....	63
3.4.2	Nutrients.....	64
3.4.3	Hydrographic and meteorological conditions.....	66
3.5	¹⁵ N based productivity study during January 2003.....	69
3.5.1	Total Production.....	69
3.5.2	New Production.....	71
3.5.3	Regenerated production.....	73
3.5.4	Rationale for preference of ammonium over nitrate.....	74
3.5.5	Vertical profile of Nitrate and Ammonium Uptake	76
3.5.6	f-ratio during January 2003.....	78
3.5.7	Effect of winter cooling on the f-ratio.....	80
3.5.8	Low f-ratio despite presence of nutrients in the water column.....	81
3.6	Chlorophyll a, nitrate and physical parameters during late February- early March 2003 in the Northeastern Arabian Sea.....	82
3.6.1	Chlorophyll a.....	82
3.6.2	Nitrate.....	84
3.6.3	Hydrographic and meteorological conditions.....	85
3.7	¹⁵ N based productivity study during late February-early March 2003.....	88
3.7.1	Total Production.....	88
3.7.2	Regenerated Production.....	89
3.7.3	New production.....	90
3.7.4	Vertical profiles of nitrate uptake.....	92
3.7.5	f-ratio.....	93
3.7.6	Source of nutrients for the sustenance of the bloom.....	94

3.8	Natural Isotopic Composition of Surface Suspended Matter.....	96
3.8.1	January.....	98
3.8.2	Late February- Early March.....	98
3.8.3	Possible reasons for increased $\delta^{15}\text{N}$	100
3.9	Conclusions.....	107

Chapter 4 The Bay of Bengal 108-172

4.1	Introduction.....	109
4.2	Effect of tracer concentration and incubation time on the uptake rate of nutrients.....	110
4.2.1	Material and Methods.....	112
4.2.2	Physical conditions and nutrients at the experimental stations.....	113
4.2.3	Results and Discussion.....	115
4.3	Earlier measurements of ^{14}C based Productivity and Chl <i>a</i> in the Bay of Bengal.....	123
4.4	Chlorophyll <i>a</i> , nitrate and physical parameters during the postmonsoon (September-October) 2002.....	124
4.4.1	Chlorophyll <i>a</i>	124
4.4.2	Nitrate.....	125
4.4.3	Hydrographic and meteorological conditions.....	126
4.5	^{15}N based productivity study during postmonsoon 2002.....	128
4.5.1	Total Production.....	128
4.5.2	New Production.....	129
4.5.3	Regenerated Production.....	131
4.5.4	f-ratio.....	132
4.6	Chlorophyll <i>a</i> , nitrate and physical parameters during premonsoon (April-May 2003)	133
4.6.1	Chlorophyll <i>a</i>	133
4.6.2	Nitrate.....	134
4.6.3	Hydrographic and meteorological Conditions.....	135
4.7	^{15}N based productivity study during premonsoon 2003.....	137
4.7.1	Total Production.....	137
4.7.2	New Production.....	138
4.7.3	Regenerated Production.....	140
4.7.4	f-ratio.....	142
4.8	Implications of the new production measurements in the Bay of Bengal	143
4.9	Relationship between new and total production: possible implication.....	147
4.10	Possible nutrient sources to the Bay of Bengal.....	150
4.11	Natural Nitrogen Isotopic Composition of Suspended Matter.....	154
4.11.1	Surface suspended matter.....	154
4.11.2	Depth profiles of $\delta^{15}\text{N}$ of suspended matter.....	160
4.12	Primary productivity estimation using IRS P4 OCM.....	163
4.12.1	OCM data processing for Oceanic constituents.....	164
4.12.2	Estimation of Primary production.....	166
4.12.3	Discussion.....	168
4.13	Conclusion.....	172

Chapter 5	Summary and scope for future work	173-181
5.1	Important findings of this study.....	174
5.5.1	New productivity study in the Bay of Bengal.....	174
5.5.2	Results from uptake experiment.....	176
5.5.3	Natural isotopic composition of nitrogen in suspended matter of the Bay of Bengal.....	176
5.5.4	Total productivity comparison with IRSP4 data.....	177
5.5.5	New and regenerated production in the Northeastern Arabian Sea.....	177
5.5.6	Natural isotopic composition of nitrogen in the suspended matter of the Arabian Sea.....	178
5.2	Scope for future work.....	179
References	182-202

List of Tables

Table	Page
1.1 Common species of marine nitrogen.....	2
1.2 Global distribution of nitrogen (Tg N yr ⁻¹).....	10
1.3 New or export production in different regions.....	17
2.1 Details of the cruises undertaken for the present study.....	25
2.2 Sampling locations along with dates of sampling during both pre and postmonsoon in the Bay of Bengal.....	28
2.3 Details of the sample depths during premonsoon season in the Bay of Bengal.....	31
2.4 List of stations with locations and dates of sampling during January 2003.....	33
2.5 Sampling depths during January 2003 in the Arabian Sea.....	33
2.6 List of stations along with locations and sampling dates during late February-early March.....	34
2.7 Sampling depths during Feb-March 2003 in the Arabian Sea.....	34
2.8 The calculated urea and ammonium concentrations using mesozooplankton displacement volume.....	35
2.9 Values and precision obtained during present study for standard materials used.....	43
2.10 The average value of ¹⁵ N atom% in the blank samples during the present study.....	44
2.11 The percentage error in ¹⁵ N atom% estimation during present study....	44
2.12 A typical example for the method used for the calibration for the estimation of total nitrogen	46
2.13 Calibration equations used for the estimation of total nitrogen content during the present study.....	48

Table		Page
2.14	Percentage error in particulate nitrogen content in the Arabian Sea and the Bay of Bengal.....	49
3.1	¹⁴ C based average total productivity values reported for different seasons and locations in the Arabian Sea.....	61
3.2	¹⁵ N based productivity and f-ratio estimates during January 2003 in the Arabian Sea.....	79
3.3	¹⁵ N based productivity and f-ratio estimates during late February - early March 2003 in the Arabian Sea.....	94
3.4	PON content and nitrogen isotopic composition in surface suspended matter during January and late February-early March.....	99
4.1	Physical parameters at the experimental stations.....	114
4.2	Comparison of specific uptake and uptake rates at two different stations for 4 h incubation at 0.01μM concentration.....	120
4.3	Time-averaged fluxes of organic carbon (gC.m ⁻² yr ⁻¹) in sediment traps, 1000 m above sea floor.....	144
4.4	The nitrate, ammonium and urea uptake rates in the Bay of Bengal during pre and postmonsoon.....	148
4.5	PON content and δ ¹⁵ N of surface suspended matter observed during pre and post monsoon in the Bay of Bengal.....	155
4.6	δ ¹⁵ N of particulate organic nitrogen in surface suspended matter from different oceanic regions of the world.....	160
4.7	The technical specifications of IRS P4 OCM.....	164

List of Figures

1.1 Evolution of isotopic composition of substrate (NO_3^-) and product (N_2) for different fractionation factors as denitrification progresses....	4
1.2 Summary of $\delta^{15}\text{N}$ in biogenic nitrogen containing substances in the marine environment.....	5
1.3 Important biogeochemical transformations involving nitrogen and their relationships.....	6
1.4 Summary of US JGOFS primary productivity observations as compiled by Falkowski et al. (2003).....	12
1.5 Simplified nitrogen cycle in euphotic zone modified after Dugdale and Goering (1967).....	14
1.6 Export ratios calculated as a function of temperature and net photosynthesis rate (Laws et al. 2000).....	14
1.7 Export flux of particulate organic carbon (^{234}Th method) vs primary productivity (Buessler 1998) (source: Treguer et al. 2003).....	15
2.1 Locations showing all the CTD stations as well as new and regenerated production stations (PP).....	28
2.2 Sampling of seawater onboard ORV Sagar Kanya.	29
2.3 Sample Locations in the NE Arabian Sea.....	32
2.4 Filtration unit used during the present study.....	37
2.5 Schematic diagram showing the elemental analyzer set up.....	40
2.6 A typical chromatogram (for ammonium sulphate ~ 0.053mg) obtained during the present study.....	42
2.7 The linearity of ^{15}N atom% for (a) atropine and (b) ammonium sulphate over widely varying sample amounts.....	45
2.8 A typical example of calibration curves using different materials (atropine, ammonium sulphate and potassium nitrate).....	47

Figures		Page
3.1	A schematic representation of identified current branches during Northeast (top) and southwest (bottom) monsoon.....	56
3.2	Findlater jet along with region assumed to have positive and negative wind stress curl (Brock et al 1991).....	57
3.3	Euphotic zone integrated concentration (left panel) and vertical profile (right panel) of Chlorophyll <i>a</i>	64
3.4	The euphotic zone integrated (left panel) and vertical profile (right panel) of ambient nitrate at different stations during January 2003....	64
3.5	The euphotic zone integrated (left panel) and vertical profile (right panel) of ambient ammonium at different stations.....	65
3.6	The long-term average Sea surface Temperature (SST) of the Arabian Sea during January.....	66
3.7	Air temperature at different stations at the time of sampling (right panel) during January 2003.....	67
3.8	The monthly average of wind speed and direction over Arabian Sea (left panel, Source: Quikscat).....	67
3.9	Air pressure at the time of sampling during January 2003.....	68
3.10	Temperature profiles at different stations obtained with Satlantic Radiometer during January 2003.....	68
3.11	Salinity variation from south to north at sampling time during January 2003.....	68
3.12	¹⁵ N based total productivity (estimated as sum of nitrate, ammonium and urea uptakes) observed during present study.....	69
3.13	New production observed at different locations during January 2003.....	71
3.14	Relationship between new and total production (excluding PP2) observed during January 2003 in the Arabian Sea.....	72
3.15	New (nitrate uptake) and Regenerated (ammonium + urea uptake) production observed in the Arabian Sea during present study.....	74
3.16	Vertical profile of nitrate uptake rates at discrete depths at different locations.....	76
3.17	Vertical profile of ammonium uptake rates at different depths at various locations.....	77

Figures		Page
3.18	f-ratio observed (with and without urea) during January 2003.....	79
3.19	The observed negative relationship between f-ratio and euphotic zone integrated nitrate (left panel).....	81
3.20	Euphotic zone integrated (left panel) and vertical profiles (right panel) of Chlorophyll <i>a</i> at productivity stations.....	83
3.21	The euphotic zone integrated (left panel) and vertical profiles (right panel) of ambient nitrate at different stations.....	84
3.22	The long-term average Sea Surface Temperature (SST) of the northeastern Arabian Sea for the study period (1-10 March).....	85
3.23	Air temperature measured over the northeastern Arabian Sea during sampling.....	86
3.24	Wind speed over the Arabian Sea during Late February-early March..	86
3.25	Air Pressure during sampling time in the Arabian Sea.....	86
3.26	Temperature profile at different stations obtained with Satlantic Radiometer during Late February-Early March 2003.....	87
3.27	¹⁵ N based total productivity during late February-early March 2003...	89
3.28	Components of regenerated production (ammonium and urea uptake).....	89
3.29	New production observed at different locations during late February-early March in the northeastern Arabian Sea.....	90
3.30	Observed relationship between new and total production in the Arabian Sea during late February and early March 2003.....	91
3.31	Relationship between new production and euphotic zone integrated nitrate observed in the Arabian Sea.....	91
3.32	Vertical profiles of nitrate uptake rates at various locations in the northeastern Arabian Sea during late February-early March.....	93
3.33	f-ratios observed (with and without urea) in the northeastern Arabian Sea during the present study.....	94
3.34	Relationship between the temperature based mixed layer depth and the residence time of nitrate in the water column.....	95

Figures		Page

3.39	Relationship between fraction of remaing nitrate (f) and its isotopic composition for different fractionation factors.....	107
4.1	Mean monthly water discharge of Ganges (averaged over 1985-1992) and Brahmaputra (averaged over 1969-1975).....	110
4.2	The result of experiment 1 showing variation in specific uptake rate (top panel), uptake rate (middle panel) and f-ratio (bottom panel).....	115
4.3	The result of experiment 2 showing variation in the specific uptake rate (top), uptake rate (middle) and f-ratio (bottom)	118
4.4	Comparison of uptake results obtained from in-situ and simulated in-situ experiments.....	121
4.5	The specific uptake rate at PP2 (left) and PP7 (right) for the incubation at different intervals during a day.....	122
4.6	Euphotic zone integrated (left) and vertical profiles of Chl <i>a</i> at different productivity stations (right) in the Bay of Bengal.....	125
4.7	Figures showing euphotic zone integrated (left) and vertical profiles of nitrate at different productivity stations.....	126
4.8	The spatial distribution of salinity (top left), SST (top right), MLD (bottom left) and typical wind speed.....	127
4.9	The euphotic zone integrated total column productivity (left) and relationship with ^{14}C based productivity (right), during postmonsoon.	128
4.10	The euphotic zone column integrated nitrate uptake (left panel) and depth profile of nitrate uptake at different stations (right panel).....	130
4.11	Euphotic zone integrated column uptake of ammonium (top left) and urea (top right).....	131

Figures		Page
4.12	The upper bound of f-ratio (left) and relationship between f-ratio and total production during post monsoon in the Bay of Bengal.....	132
4.13	Euphotic zone integrated (left) and vertical profiles of Chl <i>a</i> at different productivity stations during premonsoon	133
4.14	Euphotic zone integrated (left) and vertical profiles of nitrate at different productivity stations	135
4.15	Comparison of Salinity (top left), MLD (top right) and SST (bottom) during pre and postmonsoon in the Bay of Bengal.....	136
4.16	The euphotic zone integrated total column productivity (left) and relationship with ¹⁴ C based productivity.....	138
4.17	The euphotic zone column integrated nitrate uptake (left panel) and depth profiles of nitrate uptake at different stations.....	139
4.18	Euphotic zone integrated column uptake of ammonium (top left) and urea (top right) during premonsoon.	141
4.19	The upper bound of f-ratio (left) and relationship between f-ratio and total production during pre monsoon in the Bay of Bengal.....	142
4.20	Relationship between total and new production. Top panel represents the Arabian Sea data from Watts and Owens (1999).....	149
4.21	The relationship between $\delta^{15}\text{N}$ and PON during post (filled circles and squares represent offshore and shelf stations) and premonsoon.	155
4.22	The relationship between salinity and $\delta^{15}\text{N}$ for post (filled circles and squares represent offshore and shelf stations) and premonsoon.	157
4.23	The depth profiles of $\delta^{15}\text{N}$ and PON during premonsoon in Bay of Bengal at different stations. The filled and unfilled circles indicate $\delta^{15}\text{N}$ and PON respectively.	161
4.24	The Log-Log plot of euphotic zone integrated insitu primary productivity estimated by ¹⁵ N technique and corresponding climatological mixed layer integrated OCM values.	169
Plates showing OCM data based productivity maps for the Bay of Bengal		170-171
