

Studies in Coherent Control of Optical Processes

A THESIS

**submitted for the Award of Ph.D degree of
Mohan Lal Sukhadia University**

**in the
Faculty of Science**

BY

Shubhrangshu Dasgupta

Under the Supervision of

Prof. G.S. Agarwal

Director, Physical Research Laboratory

DEPARTMENT OF QUANTUM OPTICS and QUANTUM INFORMATION
PHYSICAL RESEARCH LABORATORY, AHMEDABAD.

MOHANLAL SUKHADIA UNIVERSITY, UDAIPUR

Year of submission: 2004

Contents

Acknowledgement	vii
Abstract	viii
1 Introduction	1
1.1 Interaction of radiation with matter	2
1.1.1 Classical electromagnetic theory : Classical picture of radiation . . .	2
1.1.2 Quantum statistical analysis of atoms	7
1.1.3 Interaction between classical fields and atoms	10
1.2 Atomic coherence effects	12
1.2.1 Two-level problem	12
1.2.2 Driven two-level problem	18
1.2.3 Coherent control in Multilevel systems	20
1.3 Outline of this Thesis	32
2 Coherent medium as a polarization splitter of pulses	34
2.1 Anisotropic medium	34
2.2 Model configuration	36
2.3 Analysis	37
2.3.1 Numerical analysis	39
2.3.2 Explanation	41
2.3.3 Verification	43
3 Laser induced magneto-chiral anisotropy	46
3.1 Magneto-chiral anisotropy	46
3.1.1 Magnetic field reversal symmetry	48
3.2 Large magnetic field reversal asymmetry using EIT	50
3.2.1 A qualitative idea	50
3.2.2 Atomic configuration	50
3.2.3 How one can obtain the asymmetry ?	52

3.2.4	Magnetic switching of transmission of an atomic medium	54
3.2.5	Question of time-reversal symmetry	56
3.3	Large magnetic field reversal asymmetry in ladder system	57
3.4	Effect of Doppler broadening in MFRA	60
4	Magneto-optical rotation of spectrally impure fields and its nonlinear dependence on optical density	63
4.1	Magneto-optical rotation	63
4.1.1	Basic equations	63
4.1.2	Stokes formalism	65
4.1.3	Recent experiment	66
4.2	A simplified atomic model	67
4.2.1	Numerical results	68
4.2.2	Analysis	70
4.3	Quantitative modeling of experimental results of Labeyrie <i>et al.</i> for MOR in spectrally impure fields	72
4.3.1	Calculation of χ_{\pm} and optical density	73
4.3.2	Discussions	74
5	Electromagnetically induced transparency, gain without inversion, and magneto-optical rotation in $J = 1/2 \leftrightarrow J = 1/2$ transition	76
5.1	Model configuration	76
5.2	Absorption and dispersion profile of σ_{\pm} components	81
5.3	Discussions	83
5.3.1	Origin of non-zero susceptibility	83
5.3.2	Origin of gain	84
5.3.3	Effect of different values of control field	86
5.4	Dressed state analysis	86
5.4.1	Calculations of dressed states	87
5.4.2	Explanation of gain	88
5.5	Coherent control of MOR : Large MOR	90
6	Coherent Control of the Fidelity of Quantum Cloning	92
6.1	No-cloning theorem	92
6.1.1	How better one can clone an arbitrary state ?	93
6.2	Quantum cloning based on stimulated emission in a V-system	94
6.2.1	Quantization of electric field	94
6.2.2	Optimal photon cloner with a V-configuration	96

6.2.3 Question of universality of cloning by a V-system	98
6.3 A method to improve the fidelity of the V-scheme for arbitrary state of the input photon	101
6.3.1 Model configuration	102
6.3.2 Analysis	102
6.3.3 Numerical results	105
6.4 Fidelity of cloning with two atoms	106
6.5 Average fidelity of cloning for a fixed biasing field	109
Conclusions and Future Outlook	113
Appendix: A	116
Appendix: B	120
Appendix: C	125
Appendix: D	130
Appendix: E	134
Appendix: F	136
Appendix: G	139
References	139
List of Publications	154
