

# **Studies in Topics Going Beyond The Standard Electroweak Model**

THESIS  
SUBMITTED TO THE  
**Gujarat University**  
IN PARTIAL FULFILMENT OF  
THE REQUIREMENTS FOR THE  
DEGREE OF  
**Doctor of Philosophy**  
IN  
**Physics**

043

B16795

By  
**Vempati Sudhir Kumar**

|          |                                                                         |           |
|----------|-------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                                     | <b>1</b>  |
| 1.1      | The Standard Model . . . . .                                            | 1         |
| 1.2      | The Minimal Supersymmetric Standard Model . . . . .                     | 5         |
| 1.3      | R-parity . . . . .                                                      | 7         |
| 1.4      | Supersymmetry breaking . . . . .                                        | 8         |
| 1.4.1    | Universality and CMSSM . . . . .                                        | 9         |
| 1.4.2    | Gauge Mediated Supersymmetry breaking . . . . .                         | 10        |
| 1.4.3    | $SU(2) \times U(1)$ breaking . . . . .                                  | 11        |
| 1.5      | Motivation and Outline of thesis . . . . .                              | 12        |
| <b>2</b> | <b>Neutrino Anomalies and Mass Models</b>                               | <b>17</b> |
| 2.1      | Neutrinos from the Sun and the Solar Neutrino Anomaly . . . . .         | 17        |
| 2.2      | Neutrinos from the Skies and the Atmospheric Neutrino Anomaly . . . . . | 20        |
| 2.3      | Neutrino Oscillations . . . . .                                         | 22        |
| 2.3.1    | Evidence for neutrino oscillations . . . . .                            | 25        |
| 2.4      | Mechanisms of Neutrino Mass Generation . . . . .                        | 26        |
| 2.4.1    | See-Saw Mechanism . . . . .                                             | 27        |
| 2.4.2    | Radiative Mechanisms . . . . .                                          | 28        |
| <b>3</b> | <b>RG scaling and R violation</b>                                       | <b>32</b> |
| 3.1      | Renormalisation Group and MSSM . . . . .                                | 33        |
| 3.1.1    | Analytical and semi-analytical solutions . . . . .                      | 35        |
| 3.2      | R violation and RG evolution . . . . .                                  | 39        |
| 3.3      | RG scaling of dimensionless L-violation and soft sector . . . . .       | 40        |
| 3.3.1    | Semi-analytical solutions . . . . .                                     | 41        |
| 3.3.2    | Numerical Methods . . . . .                                             | 42        |
| 3.3.3    | Appendix . . . . .                                                      | 43        |
| <b>4</b> | <b>Bilinear R violation and Neutrino Anomalies</b>                      | <b>51</b> |
| 4.1      | Introduction: . . . . .                                                 | 51        |
| 4.2      | Structure of Neutrino Masses: . . . . .                                 | 52        |
| 4.2.1    | Sneutrino vevs, neutrino masses and RG scaling . . . . .                | 54        |
| 4.2.2    | 1-loop mass . . . . .                                                   | 57        |
| 4.3      | Gauge mediated models and neutrino masses . . . . .                     | 60        |

|          |                                                                       |           |
|----------|-----------------------------------------------------------------------|-----------|
| 4.4      | Neutrino masses: Phenomenology . . . . .                              | 63        |
| 4.4.1    | MSW and atmospheric neutrino problem in MMM . . . . .                 | 64        |
| 4.4.2    | Vacuum oscillations and atmospheric neutrino problem in MMM . . . . . | 65        |
| 4.5      | Non-minimal model and neutrino anomalies . . . . .                    | 66        |
| 4.6      | Conclusions . . . . .                                                 | 68        |
| 4.6.1    | RG equations . . . . .                                                | 68        |
| 4.7      | Appendix . . . . .                                                    | 69        |
| <b>5</b> | <b>Trilinear R violation and Neutrino Masses</b>                      | <b>73</b> |
| 5.1      | Introduction . . . . .                                                | 73        |
| 5.2      | Sneutrino vevs and Neutrino Masses . . . . .                          | 74        |
| 5.2.1    | RG induced Tree Level Mass: . . . . .                                 | 74        |
| 5.2.2    | Loop Level Mass . . . . .                                             | 76        |
| 5.3      | Neutrino Masses and Mixing . . . . .                                  | 76        |
| 5.4      | Neutrino Masses : Phenomenology: . . . . .                            | 78        |
| 5.5      | Conclusions . . . . .                                                 | 81        |
| <b>6</b> | <b>Neutrino Mass constraints on R violation and HERA anomaly</b>      | <b>83</b> |
| 6.1      | Introduction . . . . .                                                | 83        |
| 6.2      | Basis choice and definition of $\lambda'_{ijk}$ : . . . . .           | 84        |
| 6.3      | Bounds on trilinear couplings : . . . . .                             | 86        |
| 6.4      | HERA anomalies . . . . .                                              | 89        |
| <b>7</b> | <b>Conclusions</b>                                                    | <b>98</b> |
